

- 1 A student determines the weight of a metre rule. She uses the apparatus shown in Fig. 1.1. The metre rule is supported by a pivot **at the 10.0 cm mark** and is suspended from a forcemeter by a loop of thread at the 90.0 cm mark.

Fig. 1.1

- (a) The student places a 2.0 N weight at a distance l from the pivot. She then adjusts the height of the clamp holding the pivot so that the metre rule is horizontal. She reads the force F on the forcemeter. Fig. 1.2 shows the weight and the metre rule from above. Fig. 1.3 shows the reading on the forcemeter.

Fig. 1.2 (not to scale)

- (i) Calculate the value of l from readings taken from Fig. 1.2. Show your working clearly.

$$l = \dots\dots\dots \text{ cm [2]}$$

3

**Fig. 1.3**

- (ii) Read the value F shown on the forcemeter in Fig. 1.3.

$F = \dots\dots\dots$ N [1]

- (iii) Explain how the student makes sure that the rule is horizontal before taking the reading. You may draw a diagram.

.....

.....

..... [1]

- (b) The student carries out the procedure for values of $l = 20.0\text{ cm}$, 30.0 cm , 40.0 cm , 50.0 cm and 60.0 cm . Her readings are shown in Table 1.1.

Table 1.1

l/cm	F/N
20.0	1.35
30.0	1.60
40.0	1.90
50.0	2.15
60.0	2.45

Plot a graph of F/N (y-axis) against l/cm (x-axis).
Start your axes from the origin (0,0).

[4]

- (c) (i) From your graph determine F_0 , the value of F when $l = 0$.

$F_0 = \dots\dots\dots \text{ N [1]}$

- (ii) Calculate the weight W_R of the metre rule, using the equation $W_R = 2 \times F_0$.

$W_R = \dots\dots\dots \text{ N [1]}$

- (d) Another student carrying out this experiment finds it difficult to be sure that he has placed the centre of the 2.0 N weight on the metre rule at the correct value of l .

Suggest a more precise method of applying a 2.0 N load to the metre rule in this experiment. Explain why this method is an improvement.

[Total: 11]

- 2 Some students investigate a circuit containing different combinations of resistors. Part of the circuit they are using is shown in Fig. 2.1.

Fig. 2.1

- (a) (i) On Fig. 2.1, complete the circuit to show:

- an ammeter connected to measure the current in the circuit
- a voltmeter connected to measure the potential difference (p.d.) across terminals P and Q.

[2]

- (ii) A student measures the potential difference V_1 across terminals P and Q and the current I_1 in the circuit.

Fig. 2.2

Fig. 2.3

Read the values of V_1 and I_1 shown on the meters in Fig. 2.2 and Fig. 2.3.

$V_1 = \dots\dots\dots$ V

$I_1 = \dots\dots\dots$ A

[2]

- (iii) Calculate a resistance R_1 using your values from (a)(ii) and the equation $R_1 = \frac{V_1}{I_1}$.

$$R_1 = \dots\dots\dots [1]$$

- (b) The student connects two resistors in series between terminals P and Q, as shown in Fig. 2.4.

Fig. 2.4

He measures the potential difference V_2 across terminals P and Q and the current I_2 in the circuit.

$$V_2 = \dots\dots\dots 2.7 \dots\dots\dots \text{V}$$

$$I_2 = \dots\dots\dots 0.26 \dots\dots\dots \text{A}$$

Calculate a resistance R_2 using these values and the equation $R_2 = \frac{V_2}{(I_2 \times 2)}$.

$$R_2 = \dots\dots\dots [1]$$

- (c) The student connects the two resistors in parallel between terminals P and Q, as shown in Fig. 2.5.

Fig. 2.5

He measures the potential difference V_3 across terminals P and Q and the current I_3 in the circuit.

$$V_3 = \dots\dots\dots 2.3 \dots\dots\dots \text{V}$$

$$I_3 = \dots\dots\dots 0.94 \dots\dots\dots \text{A}$$

Calculate a resistance R_3 using these values and the equation $R_3 = \frac{(V_3 \times 2)}{I_3}$.

$$R_3 = \dots\dots\dots [1]$$

- (d) Another student suggests that R_1 , R_2 and R_3 should be equal. State whether your results support this suggestion. Justify your statement with reference to your results.

statement

justification

..... [2]

- (e) (i) A student wants to determine R_1 by using a potential divider to vary the potential difference in the circuit. Draw the symbol for a potential divider.

[1]

- (ii) Briefly explain how the use of a potential divider may give a more reliable value for R_1 than using the procedure carried out in (a).

- 3 A student determines the focal length of a converging lens. She uses the apparatus shown in Fig. 3.1.

Fig. 3.1

Method 1

- (a) The student sets the distance U between the illuminated triangle and the lens. She moves the screen until a sharp image of the triangle is seen on the screen.

- (i) On Fig. 3.1, measure the distance u between the illuminated triangle and the lens.

$u = \dots\dots\dots$

On Fig. 3.1, measure the distance v between the lens and the screen.

$v = \dots\dots\dots$

[1]

- (ii) Fig. 3.1 is drawn to $1/5^{\text{th}}$ scale.

Calculate the actual distance U between the illuminated triangle and the lens in the experiment.

$U = \dots\dots\dots$

Calculate the actual distance V between the lens and the screen in the experiment.

$V = \dots\dots\dots$

[1]

- (iii) Calculate a value f_1 for the focal length of the lens. Use the equation

$$f_1 = \frac{UV}{(U + V)}.$$

$f_1 = \dots\dots\dots$ [1]

- (iv) Briefly describe a technique to obtain an image on the screen that is as sharp as possible in this experiment.

.....

.....

..... [1]

Fig. 3.2

Method 2

- (b) The student keeps the screen in the same position.

She moves the lens closer to the screen, as shown in Fig. 3.2, until another sharp image of the triangle is seen on the screen.

- (i) Measure the distance v between the lens and the screen as indicated in Fig. 3.2.

$v =$

Fig. 3.2 is drawn to $1/5^{\text{th}}$ scale.

Calculate the actual distance V between the lens and the screen in the experiment.

$V =$

[1]

- (ii) The illuminated triangle and its image are shown full size in Fig. 3.3 and Fig. 3.4.

Fig. 3.3

Fig. 3.4

Measure h_O , the height of the illuminated triangle, as shown in Fig. 3.3.

$$h_O = \dots\dots\dots$$

Measure h_I , the height of the image on the screen, as shown in Fig. 3.4.

$$h_I = \dots\dots\dots [1]$$

- (iii) Calculate a value for the magnification M using the equation $M = \frac{h_I}{h_O}$.

$$M = \dots\dots\dots [1]$$

- (iv) Calculate a second value f_2 for the focal length of the lens using the equation $f_2 = \frac{V}{(M + 1)}$ and the value of V from (b)(i).

$$f_2 = \dots\dots\dots [1]$$

- (c) State **one** precaution the student must take to ensure that the **measurements** of U and V in this experiment are as reliable as possible.

.....
 [1]

- (d) (i) Explain why **Method 2** is likely to produce a less accurate value for the focal length than **Method 1**.

.....

 [1]

- (ii) Suggest **one** improvement to make **Method 2** more accurate.

.....

[Turn over]

- 4 A student investigates the factors affecting the electrical output of a solar cell. A solar cell is a device which transforms light energy into electrical energy.

Plan an experiment which will enable him to investigate how the potential difference across the terminals of the solar cell varies with the angle of the incident light.

The apparatus available includes:

a solar cell as shown in Fig. 4.1
a laboratory lamp.

In your plan, you should:

- list any additional apparatus needed
- state the key variables to be kept constant
- explain briefly how to carry out the experiment, including any precautions that must be taken to ensure reliable results
- draw a table, with column headings, to show how to display the readings (you are **not** required to enter any readings in the table)
- explain how to use the readings to reach a conclusion.

You may add to Fig. 4.1 or draw another diagram if it helps to explain your plan.

Fig. 4.1
